OSI ECPINS 6.4 Release Offers the Latest in IMO Compliance

- **ECPINS 6.4 offers the latest in compliance with IMO regulations and capabilities**

- **Meets the latest navigation display conformity and user interface design**

- **Integrates with an even larger selection of sensors**

OSI is pleased to announce the release of ECPINS 6.4, the latest in ECPINS suite of OSI's leading Warship Electronic Chart Display Information Systems (WECDIS) and the core of OSI's Integrated Navigation and Tactical System (INTS).

The new release offers the latest in compliance with IMO regulations and capabilities developed directly from customer feedback and OSI research and development.

ECPINS 6.4 features enhanced performance based on EU Marine Equipment Directive & UK Marine Equipment Regulations which mandate IEC 62288 Ed3 to meet the latest navigation display conformity and user interface design, and IEC 61924-2 Ed 2 for the latest in Integrated Navigation System standards.

The release also allows ECPINS to integrate with an even larger selection of sensors, including advanced commercial AIS, secure Warship-AIS, and the latest in Autopilot sensor technology.

Throughout the process, ECPINS 6.4 was a collaborative effort representing contributions from OSI's team of navigation subject matter experts, Engineers, Designers, and Technical Writers.

"Ensuring Safety and security for our naval customers is written right into our mission statement, and I am proud that the underlying message is embedded in the DNA of every new ECPINS release we deliver, and 6.4 is no exception."

Ken Kirkpatrick, President & CEO, OSI Maritime Systems

"The underlying aim for ECPINS 6.4 was compliance with IMO regulations and expanding its capabilities to ensure that the crew and ship are kept as safe as possible. Once again, the OSI team has achieved this and more."

Jordan Pratt, Vice President, Product Development, OSI Maritime System
